**FOR IMMEDIATE RELEASE**

## **ClimaCab® Sales Exceed Expectations**

*Glacier Bay, Inc. Reports 1<sup>st</sup> Half ClimaCab Sales Achieved 141% of Forecast*

**UNION CITY, California – (July 28, 2009)** – Glacier Bay, Inc. reports first half sales of its electric APU, ClimaCab®, accomplished 141% of plan, despite the economic slump. Providing exceptional savings and unparalleled performance, the no-idle solution has quickly developed a significant following among truck fleets.

“It’s the right product at the right time. With our current economic climate, ROI is key. Once fleets experience the performance and savings of ClimaCab first hand, they are sold,” noted Jay Parr, ClimaCab General Manager.

Truck fleets across the nation are rapidly transitioning from diesel APUs to the ClimaCab electric APU. Royal Jones, President of Mesilla Valley Transportation, stated, “We like ClimaCab because it does what it says it’s going to do. I would recommend ClimaCab to anyone.”

Glacier Bay, a leader in power management technology, brings a unique perspective to idle-reduction technology. For nearly twenty years, Glacier Bay has solved energy management problems for organizations such as NASA, the Department of Energy, Defense Advanced Research Projects Agency (DARPA), Northrop Grumman, IBM, and Hewlett Packard. Now the company is delivering innovative energy-saving solutions to the Class 8 truck market.

Powered by four deep-cycle batteries, ClimaCab uses no fuel, requires no annual maintenance, and has no emissions. It provides exceptional fuel savings and an ROI twice as fast as diesel APUs, without the associated maintenance or costly particulate

filters. In addition, the CARB-compliant, EPA and SmartWay-verified technology offers fleets a solution that complies with all present and future emissions regulations.

During the past several months, fleets have tested the system's performance and run time in extreme temperatures. In a recent test, ClimaCab maintained a comfortable truck bunk temperature of 68°F for over 10 hours at 104°F. Results are positive and drivers report staying cool and getting a quiet, restful night's sleep.

A critical ingredient in Climacab's success is its robust service network. With over 80 locations in the USA and Canada, the experienced truck A/C dealer network offers coast-to-coast service. The dealers understand truckers' needs and certified ClimaCab technicians provide in-field service 24/7. Beyond that, a call to ClimaCab's main line after hours is automatically forwarded to a certified technician regardless of the day or time.

With truck fleets scrambling to cut costs in this down economy, ClimaCab delivers cool cash to their bottom lines. More information about the system can be found at:
